EXPERIENCE

2022-2025 **Walmart ASR (acquired by Symbotic in February 2025)** - Andover, MA, USA

Software Engineer II - 2024-2025

Software Engineer I - 2022-2024

- Implemented core backend logic for the primary emulation framework using the Spring Boot framework
- Developed numerous features to match the on-site system state and power behaviors, improved emulation system performance, and fixed bugs
- Reshaped CI/CD pipelines, introducing trunk-based development and greatly reducing merge-to-deploy times
- Automated documentation and API client generation pipelines, integrating them into automated testing workflows and providing direct, auto-updated resources for emulation and SQA teams
- Built and maintained an internal web app (Svelte, Kubernetes, Gitlab API) used company-wide to deploy, manage, and test versioned releases of the company product, significantly improving release management and release reliability
- Diagnosed cross-team issues in software and Kubernetes deployments, reducing testing downtime and discovering bugs
- Collaborated closely with developers, PMs, and QAs in an Agile development environment to deliver adaptable, compatible, and high-quality emulation software

EDUCATION

2018-2022 **Tufts University** - Medford, MA, USA

Bachelor of Arts in Computer Science

- Graduated *magna cum laude*
- GPA: 3.70, Dean's List
- Coursework: Algorithms, Data Structures, Web Development, Network Security, Cybersecurity, Machine Structure & Programming, Theory of Computation (TA), Game Development, Discrete Mathematics

PROJECTS

2025 **MiniPlace**

- Built a real-time, multi-user canvas painter page inspired by r/place using Flask backend and React frontend
- Implemented live and consistent updates with SocketIO to synchronize state across multiple clients
- Deployed and configured the website on AWS EC2 with an Nginx reverse proxy

2025 **Elevator Emulator**

- Built an elevator emulator service in Java with Spring Boot, exposing REST APIs for creating, calling, and managing simulated elevator objects
- Streamed elevator state data via WebSockets to support interactive and efficient monitoring
- Applied Spring Bean abstractions, allowing for efficient swapping of elevator selection algorithms

SKILLS & TOOLS

- **Programming Languages:** Python, Java, JavaScript, TypeScript, C++, HTML, CSS, SQL
- **Infrastructure & Automation:** AWS, Kubernetes, Docker, Helm, Gitlab CI/CD, Github Actions, Bash, Prometheus, Grafana, Nginx
- **Frameworks:** Spring Boot, React, Flask, Svelte, Pytest, Kafka
- **Other:** PostgreSQL, MongoDB, Git, Slack, Jira, Unity
